

What's a bus weigh?

If it's from GE, the answer is: not much.

Spectra™ Series busway is at least 50% lighter than comparable wire and conduit – and lighter than competitive busway, too. Which simplifies design and reduces installation time (per NECA labor standards). Which may lower your total installed cost by up to 75% versus wire and conduit.

Compact Spectra™ Series also allows runs in more places, such as around and between existing structures. And removeable isolation joints mean maintenance and modification are done easily and with minimal downtime, which may lower your operational costs versus wire and conduit as your building needs change.

Lighter, smaller, lower cost, easier modification.
Hop on board with Spectra™ Series busway from GE.

Spectra is a trademark of the General Electric Company. Your average school bus weighs 12 to 14 tons.
