

GE  
Entellisys™ low-voltage switchgear

# Forewarned is forearmed

You have real enemies.

They have names like "arcing fault" and "bolted fault."

If they catch you unaware, they threaten people, property and uptime.

**Introducing Entellisys**, low-voltage switchgear with smart components that monitor themselves 24 hours a day. If one of these components detects a potential threat, Entellisys sends you a warning by pager or email. Immediately.

Wherever you are, whenever you need to know, Entellisys gives you the intelligence you need to keep the power flowing and defend your people and property.

**See for yourself:** To learn how smart components and other unique features enable Entellisys to deliver superior reliability, visit us on the Web to download Entellisys videos or to order an Entellisys DVD.
